

GLASS & MULTI SURFACE PROTECTION

Avoid Damage & Costly Cleanup

6035 - SURFACE PROTECTION FILM

Extra tough Green Polyethylene Film coated with a solvent free pressure sensitive acrylic adhesive. Designed for temporary protection of various surface areas & will remove from most surfaces without leaving residue behind.

Standard Roll Length: 100 meters

Standard Roll Width: 500 / 600 / 1000mm

Roll Widths: Can be slit to required width sizes from our master log roll at 1200mm wide.

FEATURES:

Good balance of adhesion for temporary protection of:

- Glass surfaces - windows, glass doors & splash backs
- Aluminum window frames
- Most metal & plastic surfaces

Clean removal without leaving residue behind:

- For exterior use up to 3 months
(we always recommend prior testing to assess surface to application suitability).

Protect against:

Paint overspray & splattering

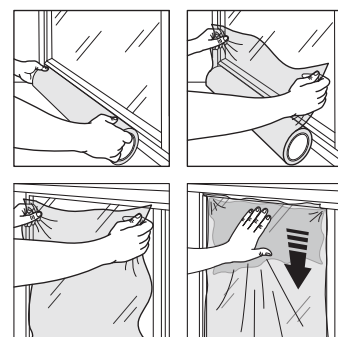

Surface abrasion & Scratching

Dirt, dust & weather Condition

FOR BEST RESULTS:

- The protection film roll stays on the ground or is hand held in the position.
- Next the film is pulled up away from the window to the top.
- Then the film is wiped on back down the window surface to ensure good clean adhesion.
- The film roll can be cut to suit the window and sash requirements.

Surface testing always recommended before apply. See surface application & preparation details at: www.tapespec.co.nz
